AMIR MEHRNAM

SENIOR FULL-STACK SOFTWARE ENGINEER | 14+ years | Web · Mobile · Game · Production Systems

Shiraz, Iran · m.amir.mehrnam@gmail.com · +98 917 253 4077 · github.com/AmirMehr

OPEN TO RELOCATION
HYBRID / ON-SITE / REMOTE

PROFESSIONAL SUMMARY

Full-stack software engineer with 14+ years of professional experience since 2012, building web, backend, mobile and specialized applications. **My strongest differentiator is end-to-end ownership**: I have often been responsible for the whole path from unclear requirements and system/database design to implementation, integrations, production deployment and ongoing maintenance. Long-term freelance work has also meant direct communication with clients and stakeholders, independent technical decisions, and responsibility for what happens after release.

ENGINEERING CHALLENGES I'VE HANDLED

Evolving business rules	translated changing school administration and financial requirements into application logic and adapted a live database schema as workflows changed
Owning production	deployed, debugged and maintained live applications across shared hosting and self-managed Linux VPS environments
Specialized products	delivered 3D web design, real-time multiplayer, maps, game, mobile apps, payment flows, Telegram automation and other non-standard requirements
Client-led delivery	worked directly with clients and stakeholders to clarify incomplete requirements, make technical trade-offs and carry changes through production
Learning by solving	repeatedly adopted unfamiliar languages, frameworks and platforms when the project required a practical solution

TECHNICAL SKILLS

AREA	CORE / USED	FAMILIAR / NOTE
Languages	TypeScript · JavaScript · PHP · Java · Kotlin · Swift · C#	Familiar: Python · Rust
Frontend & cross-platform	React · Redux · MUI · Next.js · Vue · React Native · WebGL / Babylon.js	Familiar: Angular
Backend & APIs	Laravel · Node.js · Express · REST · third-party integrations	Familiar: NestJS · GraphQL · Django · Spring Boot
Mobile & 3D	Android · Java · Kotlin · iOS · Swift · Babylon.js / WebGL	Familiar: Unity · React Native
Data	MySQL · MongoDB · SQLite	Familiar: PostgreSQL
Infrastructure & delivery	Linux · VPS administration · Caddy · SSL/TLS · DNS · Cloudflare CDN · Docker · CI/CD	Azure instance experience (not production cloud deployment)
Integrations	Google Maps · Leaflet · Firebase · Telegram bots · payment integrations · mobile integrations · real-time application development · Google Play Games	

PROFESSIONAL EXPERIENCE

Freelance Software Engineer / Full-Stack Developer | 2012 – Present

- **End-to-end delivery:** Independently built and delivered business, educational, e-commerce, automation, 3D and mobile software, game, often owning projects from initial requirements to production.
- **Client and stakeholder work:** Worked directly with clients to clarify requirements, translate business needs into technical solutions, evaluate trade-offs and coordinate changes through delivery.
- **Full-stack engineering:** Designed application architecture and databases; developed frontend, backend and mobile components; integrated third-party services; and maintained production systems.
- **Production delivery:** Deployed and supported applications on shared hosting and self-managed Linux VPS infrastructure, including PHP, MySQL, phpMyAdmin, Caddy, SSL/TLS, DNS and Cloudflare CDN.
- **Adaptability:** Repeatedly moved between languages, frameworks and platforms as project requirements changed, learning unfamiliar technologies through the underlying problem and practical implementation.

SELECTED PROJECTS

PROJECT	PRODUCT / CONTRIBUTION
TajallieNoor.ir Educational platform · Laravel · React · MySQL	• **Built an education platform:** online classrooms, file sharing and institution workflows. • **Owned the lifecycle:** requirements, application/database design, deployment and ongoing maintenance.
DaneshMobin.ir School management & financial system · React · Redux · MUI · PHP · MySQL	• **Business rules into software:** translated changing administrative and financial requirements into application and database logic. • **Production schema evolution:** adapted the live data model as school workflows and rules changed. • **Operational scope:** events registers, payments, online classrooms, buffet management and online payments.
Hoobi.ir 3D home-design platform · Babylon.js · Web · Java/Android	• **3D application:** developed a home-design tool for interior designers using Babylon.js. • **Cross-platform delivery:** connected Android and web applications around the same product workflow.
Nobelab Laboratory delivery automation · React · Redux · MUI · PHP · MySQL	• **Workflow automation:** converted a real operational delivery process into maintainable software, reducing manual work and opportunities for human error.
OnSpeedVPN Web · Android · Telegram ecosystem · Kotlin · PHP	• **Product ecosystem:** developed the Android application, website and Telegram bot shop. • **Payments:** integrated cryptocurrency and Perfect Money payment flows.

ADDITIONAL SELECTED WORK

Vitrinom.ir	web · Android · PWA · Leaflet / Google Maps
Beauty Bay	iOS / Swift · reservations
Carbalad	Android / Java · vehicle pricing + in-app purchases
Bomby 2D Game	Android · real-time multiplayer · Bluetooth · Google Play Games · Play Store published

EDUCATION & LANGUAGES

EDUCATION	**Bachelor of Information Technology** Kazeroun Salman Farsi University	**2009–2013**
LANGUAGES	**Persian —** Native **English —** C1 **German —** A2 **Arabic —** A2
